Professional Summary

Motivated and disciplined Computer Science student at the University of the Witwatersrand with strong problem-solving abilities and a solid foundation in programming, mathematics, and logical analysis. Proficient in Python, C++, HTML, and Java, with practical experience building applications such as calculators, data visualizations, and database-driven Android projects. Demonstrated leadership, teamwork, and resilience, combined with a passion for using technology to solve real-world problems and uplift underserved communities. Quickly adapts to new concepts and consistently delivers high-quality work in academic and project environments.

Objective

To leverage my strong problem-solving skills and programming expertise in Python, C++, SQL, and Java to contribute effectively to innovative tech projects while further developing my knowledge and experience in software development.

Skills

- **Programming Languages:** Python, C++, SQL, Java.
- **Web development:** HTML, CSS and JavaScript.
- **Debugging and Troubleshooting:** Identifying and resolving software bugs efficiently.
- **Technical Skills:** Data Structures, Algorithms, Software Development, Version Control (Git).
- **Soft Skills:** Problem-solving, Critical thinking, Time management.

Projects

- **Creating a Sudoku solver program in C++:** This project challenged me to apply my knowledge of data structures, algorithms, and recursion to solve a complex problem. Initially, the program could solve standard 9x9 puzzles, but I later optimized it to handle larger 16x16 grids.
- **Full-Stack Posting Application (Node.js + MySQL):** Designed and developed a database-driven web application allowing authenticated users to create and manage posts.
- **Exploratory Data Analysis on Titanic Dataset (Python):** Performed data cleaning, preprocessing, and statistical analysis on `titanic.csv`.
- **Snake Game Project (Java):** Collaboratively developed a console-based Snake game as part of second-year coursework. Implemented object-oriented design principles and collision detection logic. Applied data structures to manage game state and dynamic movement.

Education

- **Moreko High School**, Class of 2023
 - Achievements: 4 distinctions, including top performance in Mathematics and Physical Science.
- **University of Witwatersrand**, BSc Computer Science (2024 - Present).
 - Achievements: 4 distinctions in first year of BSc Computer Science.

Certifications

- Certificate for Top Learner in Mathematics, Grade 11 and Grade 12 (Term 3).
- Certificate of Distinction in Mathematics and Physical Science from ProMaths.

Interests

- Passion for problem-solving and tackling challenging tasks.
- Coding and software development.
- Data Science: Analysing datasets and creating visualizations using tools like python.
- Tech Innovation: Staying updated on the latest advancements in technology, AI and cybersecurity.

Languages

- English
- Sepedi
